Hospital***

***2007-08***

# **CLINICAL PSYCHOLOGY INTERNSHIP PROGRAM NAPA STATE HOSPITAL 2007-08**

## **MISSION**

Napa State Hospital (NSH) offers rich and varied training opportunities for clinical psychology interns. Continuous accreditation by the American Psychological Association since 1959 speaks to the quality, spirit, and tradition of the Clinical Psychology Internship Program (CPIP). NSH is located on 2,000 acres in the southeast corner of the beautiful Napa Valley in Northern California. The professional staff currently includes 65 psychiatrists, 53 psychologists, 65 social workers, 80 rehabilitation therapists, and a large nursing service. Although most of the supervision which psychology interns receive is provided by clinical psychologists, training from other mental health disciplines is provided as well (e.g., Grand Rounds), and inter-disciplinary collaboration is, of course, commonplace in an in-patient setting. In addition to the CPIP, training programs in other disciplines at NSH (e.g., Forensic Fellowship, Department of Psychiatry and Behavioral Sciences, U.C. Davis) provide supplemental learning opportunities. NSH is an Equal Opportunity Employer, which actively recruits individuals from diverse cultural and ethnic backgrounds. Currently, 50% of NSH hospital staff (and 47% of NSH patients) identify as ethnic minorities. Such diversity enhances an awareness and appreciation for the role which ethnic factors play in psychiatric treatment. NSH can accommodate physically challenged patients, staff, and interns, because it is almost completely wheelchair accessible.

## **PATIENT POPULATION**

As of this writing (June, 2006), NSH provides psychiatric treatment for approximately 1150 patients. Patients at Napa State Hospital can be divided into two broad categories. Approximately 75% of our patients are hospitalized under criminal commitments, while 25% have civil commitments.

### **CRIMINAL COMMITMENTS**

Patients with criminal commitments can be divided into three groups. These include patients who are

- A. Not Guilty By Reason Of Insanity (NGRI),
- B. Incompetent To Stand Trial (IST), or
- C. Mentally Disordered Offenders (MDO). These patients are admitted to NSH in several ways:

- Committed to the California Department of Mental Health by county superior court under one of the three penal code designations noted above.
- Transferred from a more secure facility for treatment in a less restrictive setting.
- Returned from Community Outpatient Treatment (COT) for noncompliance when the county conditional release program (CONREP) advises the county superior court that the patient may not be safely managed in the community

### **Not Guilty By Reason Of Insanity (NGRI)**

*NSH provides treatment for the largest population of NGRI patients of any facility in the country.* The overall goal for these patients is improvement to the point where they gain admission or re-admission to CONREP, which coordinates return to the community. NGRI patients are treated on thirteen locked and 3 open units (where patients can move about freely within the fenced-in Secure Treatment Area). Specialized treatment programs are provided on several of these units. These include the Geropsychiatric NGRI Unit and the Sex Offender Treatment Program. Several of the NGRI units are co-ed. Movement between the open and locked units is based on evidence of responsible behavior. Psychologists on these units serve as members of a multidisciplinary treatment team. They provide individual psychotherapy and group treatment services (e.g., process and support groups, chemical dependency groups, etc.) and consultation services. In addition, psychologists write and implement behavior plans, provide crisis intervention services, and testify at writ and extension hearings. A major component of group treatment on NGRI units is the Forensic Issues Group, where patients are encouraged to come to terms with their mental illness, understand the role their illness played in their instant offense, and learn relapse prevention skills. A broad range of rehabilitative and recreational therapy services is also offered by other disciplines.

### **Incompetent To Stand Trial (IST)**

These individuals have committed a criminal offense but are unable to go to trial or plea-bargain because of mental impairment. The county superior courts have determined that these defendants are unable to understand the criminal charges against them and/or assist their attorneys in preparing a rational defense. The focus of treatment for these patients is to regain competency so that they can return to court and face charges. As on NGRI units, psychologists on IST units also serve on a multidisciplinary team and provide the range of clinical treatment services noted above. However, treatment for these patients is more psychoeducational in nature. Patients attend competency groups designed to enable them to understand the nature of the criminal charges against them and to meaningfully participate in their own defense. They must successfully pass the Competency Assessment Test (CAT), Mock Trial (patients tested as defendant in mock version of their own trial), and a dispositional hearing before they are returned to court. The IST patients are treated on 5 locked units.

## **Mentally Disordered Offenders (MDO)**

MDO patients are former parolees of the California Department of Corrections. They were convicted and have served prison sentences. These patients completed their parole but because of continuing mental illness and dangerousness, have been committed to DMH for continued treatment. MDO patients are the smallest of the 3 forensic patient groups. They receive treatment on NGRI units.

## **Specialized Forensic Treatment Programs**

For the most part, patients are treated on units organized around penal code status (e.g., NGRI). However, there are several specialty units/programs, which address the needs of forensic patients:

### A. The Forensic Research Unit

Research is currently underway looking at particular variables as predictors of treatment outcome. The treatment program on this unit is similar to the programs noted above with two notable exceptions. First, patients receive an extensive battery of tests at intervals prescribed by a particular research protocol. Additionally, treatment in this program has a cognitive-behavioral orientation. Treatment groups include cognitive-behavioral treatment of personality and psychotic disorders, as well as a core relapse prevention group. This unit is run conjointly by the Department of Psychiatry and Behavioral Sciences, University of California, Davis, and by Napa State Hospital. This unit coordinates forensic research at the hospital.

### B. The Sex Offender Unit and Hospital-Wide Sex Offender Treatment Program

The Sex Offender Unit provides treatment for patients who meet one of three criteria: 1) the instant offense was sexual in nature, 2) the patient has been designated as a 290 sex-offender registrant, or 3) there are sexual events or issues in the patient's history which are of concern to the treatment team, or the Conditional Release Program. The treatment program on this unit is modeled after the one at Atascadero State Hospital, which is the standard of care for sex offenders in the relapse prevention model. It includes four phases of treatment. The hospital-wide program is similar in design, and provides less intensive treatment for patients receiving treatment on other units.

## **CIVIL COMMITMENTS**

Patients who represent a danger to themselves or others, but who have committed no crime, are committed to NSH pursuant to civil commitment statutes. Typically all patients are county conservatees who are too severely disturbed to be treated in locked facilities or board and care homes in their county of origin. Unlike the forensic units, these patients are not housed as a function of penal code status. Civilly committed patients are treated on different units as a function of their age, gender, level of functioning, acuity, or special needs. There are currently 8 in-patient units. These include an acute/receiving, geropsychiatric, deaf and hearing-impaired, and several all male and

one all-female unit. Treatment programs for these patients are similar to those of the forensic patients, without a focus on criminal behavior. Like the forensic units, the treatment program on each civil unit is grounded in a needs assessment of the particular patients it serves. For example, the all-female unit provides treatment for patients with severe borderline personality disorder, dissociative identity disorder, trauma and recovery, and self-injurious behavior. Psychologists offer the same range of clinical services as provided on forensic units. They also testify at writ hearings.

## CLINICAL PSYCHOLOGY INTERNSHIP PROGRAM

### **GENERALIST TRAINING**

Our intention is to prepare pre-doctoral interns for entry level practice in professional psychology. The training program is geared toward this general aim as well as the specific interests and needs of the intern class. We subscribe to a “general practitioner model,” with an emphasis on public service to the severely mentally ill. We offer generalist training because we believe that the focus of predoctoral training should be on the acquisition and consolidation of general clinical skills. Training is provided in the treatment of patients with severe mental disorders. An intensive training experience with severely disturbed individuals can provide an invaluable foundation for understanding the entire spectrum of mental disorders. Interns are trained to provide a broad range of clinical services, which is also consistent with a generalist approach. Interns will be able to apply skills obtained here to a variety of treatment settings and populations. By “practitioner”, we mean that our focus is on the acquisition of professional skills, which are based on the science of psychology. We encourage and provide ample opportunities for interns to obtain specialty training (e.g., neuropsychological assessment) provided they are making satisfactory progress in the acquisition of generalist skills.

### **GOALS**

We have identified 7 areas in which interns will achieve entry levels of competence:

- 1) *Competence in Professional Conduct, Ethics and Legal Matters,*
- 2) *Competence in Individual and Cultural Diversity,*
- 3) *Competence in Theories and Methods of Psychological Diagnosis, and Assessment,*
- 4) *Competence in Theories and Methods of Effective Psychotherapeutic Intervention,*

- 5) *Competence in Scholarly Inquiry and Application of Current Scientific Knowledge to Practice,*
- 6) *Competence in Professional Consultation, and*
- 7) *Competence in Supervision.*

Subsumed within these goals are a number of training objectives, which specify the particular skills in each area that interns will be expected to obtain.

### **INDIVIDUALIZED TRAINING PLAN**

We encourage each intern to take the lead in developing an individualized training plan that is focused upon the development of specific clinical skills (e.g. psychological assessment, psychotherapy with individuals suffering from schizophrenia or severe personality disorders). Our training staff helps to clarify each intern's interests and needs at the beginning of the training year. Input for this plan is also solicited from the Director of Training at each intern's graduate program and from former clinical supervisors. This plan guides the direction or emphasis of various training activities.

### **OPPORTUNITIES FOR FORENSIC TRAINING**

*We do not offer a formal forensic training track. At the present time, the CPIP offers an orientation to select areas in forensic psychology only.* As noted above, we believe that the predoctoral year should focus on the consolidation of generalist skills. Our orientation to forensic psychology has several components. We offer a 15-week forensic seminar covering topics such as "NGRI: History and Case Law" and "Risk Assessment". In addition, interns can participate in the hospital-wide forensic trainings noted above. They can also attend the forensic case-consultations and mock trials (staff practices providing expert testimony while being cross-examined by UC Davis staff) offered by the Department of Psychiatry and Behavioral Science at U.C. Davis.

### **TRAINING ACTIVITIES**

Training is primarily provided in four ways:

- Clinical service delivery,
- Individual supervision,
- Seminars, and
- The preceptor/mentor program.

## **CLINICAL SERVICE DELIVERY**

(Note: a, b, and c below are required training activities, while d, e, f, and g are elective)

### **A. Working on an Inpatient Unit**

The 12-month internship is divided into two 6-month rotations. A rotation commitment entails 16-20 hours a week on an inpatient unit. The psychologist at the site provides supervision. The clinical responsibilities for the intern are the same as for the unit psychologist. Interns serve as members of a multidisciplinary treatment team. They provide individual psychotherapy and group treatment services (e.g. process and support groups, chemical dependency, etc). In addition, interns write and implement behavior plans and provide crisis intervention services. They also provide consultation services to staff regarding treatment of patients, as well issues pertaining to unit staff. The one exception is that interns cannot testify in court but are welcome to observe licensed staff testify as fact or expert witnesses.

### **B. Psychological Assessment**

Interns are expected to complete a minimum of twelve psychodiagnostic assessments during the internship year. Testing cases are typically selected from the rotation site. In practice, interns typically test patients from throughout the hospital, as an effort is made to funnel the best training cases to interns. Each intern meets weekly with their psychodiagnostic assessment supervisor and has two or more (e.g. neuropsychological or forensic risk assessment supervisor) different psychodiagnostic assessment supervisors during the year. Supervisors can be selected on the basis of a special interest in a test instrument, such as the Rorschach or MMPI. Supervision and training in neuropsychological assessment is also available for interns. Depending on the intern's interest and skill in this area, neuropsychological training can range from simply developing basic neuropsychological screening skills to completing several full neuropsychological assessment batteries.

### **C. Individual Psychotherapy**

Interns are expected to carry three to five long-term psychotherapy cases throughout the training year. Long-term patients are typically seen one or two times a week. These cases can be selected from anywhere in the hospital and thus may reflect a broad or narrow range of psychopathology. A specific supervisor is chosen for each case and supervision occurs on a weekly basis. Theoretical orientations of the staff are varied. A representative sample of our staff's orientations includes Psychodynamic (Drive Theory, Ego Psychology, Object-Relations, and Self-Psychology) Jungian, Existential, Interpersonal, Gestalt Therapy and Cognitive-Behavioral treatment approaches. In addition to long-term psychotherapy, interns may provide short-term therapy to patients at their rotation site. Short-term therapy is usually employed for circumscribed problems. The rotation supervisor generally provides supervision of short-term therapy cases and psychotherapy groups at the rotation site.

#### **D. The Positive Behavioral Support Team (PBS)**

The Psychology Department offers a hospital-wide behavioral consultation service. The purpose of this service is to assist treatment teams in developing PBS plans designed to support individuals in developing and maintaining recovery-enhancing behaviors and lifestyles. The four psychologists who provide these services possess skills in psychological assessment and behavioral analysis, as well as in consultation. Behavior plans function both to manage behavior harmful to self and others as well as to provide patients with the structure and support needed to achieve treatment goals. Interns have spent from 2 hours up to 10 hours per week with the Positive Behavioral Support Team.

#### **E. The Employee Assistance Program (EAP)**

This program provides short-term psychotherapy to hospital employees and their families. This may take the form of individual, couples, or family therapy.

#### **F. The Critical Incident De-Briefing Team**

This is a multidisciplinary team of clinicians who provide support to patients, staff, and the organization-at-large following a traumatic event (e.g. assault of patient or staff)

#### **G. The On-Duty Psychologist (ODP)**

The ODP is “on-call” to every unit in the hospital, from 5:00 p.m. to 1:00 a.m. each day. The function of the ODP is to provide proactive interventions for patients who are experiencing emotional difficulties, so that more restrictive interventions (e.g. seclusion and restraint) are not needed.

### **INDIVIDUAL SUPERVISION**

Interns receive a minimum of 5 hours per week of individual, face-to-face supervision. These include meetings with a rotation supervisor, a psychodiagnostic assessment supervisor, and three individual psychotherapy supervisors. The intern meets with each supervisor once a week and more if desired or needed. The Director of Training works with each intern in the selection of supervisors for each rotation, and in the selection of long-term psychotherapy cases.

### **SEMINARS**

There are three core weekly seminars:

#### **A. Psychodiagnostic Assessment Seminar**

A variety of assessment approaches and instruments are examined in depth and explored as to their usefulness with various psychological disorders. The format of the seminar is divided between a didactic component and group supervision of psychological assessment data gathered by interns. A special segment of the seminar is devoted to tests, which measure neuropsychological functions.

### **C. Psychotherapy Seminar**

The focus of this seminar is the theory and practice of psychotherapy. During this seminar, professional staff presents the theory and technique of various approaches to psychotherapy approaches as applied to this patient population. This seminar also alternates between didactic presentations and a psychotherapy case-conference format. Other topics include experiential as well as didactic presentations on cultural issues that bear on psychiatric treatment, psychotropic medications, etc.

### **D. Professional Issues Seminar**

This seminar has several functions. One purpose is to create an environment where interns are able to process various aspects of their training experience. To this end, interns define the agenda during the initial portion of the seminar. In the past, interns have discussed such topics as adjustment to working with severely disturbed patients, the role of a psychologist and developing a professional identity. This seminar also includes a module on Legal and Ethical Issues as well as a module on Forensic Psychology

### **PRECEPTOR/MENTOR PROGRAM**

Some interns have reported that our Preceptor Program was the most valuable aspect of their training experience here. The goal of this program is to provide an opportunity for interns to discuss the range of concerns they may have, related to their professional development, with a member of our training staff (preceptor). The preceptor has no evaluative function. The mentor/student relationship is essentially confidential, so that issues might be discussed in a more unencumbered fashion. Participation in this program is optional.

### **HOSPITAL-WIDE TRAINING OPPORTUNITIES/RESOURCES**

- *The Department of Professional Education Grand Rounds*  
Weekly presentations on a wide range of topics in mental health are offered where NSH staff and specialists from around the country are featured.
- *Department of Psychology Training*.  
Specialists from the Bay Area and around the country provide training that addresses the specific educational needs of psychologists.
- *UC Davis Forensic Case Consultation*  
The Forensic Fellowship Program offers a bi-monthly consultation on NSH forensic patients who have been referred by NSH treatment teams.
- *UC Davis Mock Trial*  
The Forensic Fellowship Program offers mock trials where NSH staff practices expert testimony while being cross-examined by UC Davis staff.

- NSH Professional Library  
The NSH Professional Library subscribes to nearly 120 journals. The library also offers the computer search services of PsychINFO and Medline.
- Field Trips  
Interns participate in two or three field trips each year. In recent years, interns have visited several California State Prisons, the “ethnic focus” inpatient psychiatric units at San Francisco General Hospital, and several private or county inpatient treatment facilities.
- Computers  
Computers are available to aid interns with their clinical work. The Department of Psychology has test scoring and interpretation software, including programs for interpreting the MMPI-2, Rorschach, and the Millon Clinical Multiaxial Inventory-3, among others. Each intern also has his or her own computer network account, which allows access to the Local Area Network (LAN). Network accounts include GroupWise e-mail for communication and correspondence, and access to the Internet.

## **EVALUATION OF INTERN PERFORMANCE**

- Each intern meets regularly with the Psychology Internship Director to discuss his or her training experience.
- Training supervisors meet monthly to review the progress of each intern (and to provide peer supervision in their work as supervisors). Areas of particular strength and areas requiring more attention for continued professional development are identified for each intern. Formal rotation evaluation meetings occur in the middle and at the end of each 6-month rotation period. At these meetings, each intern meets with all of his/her supervisors to review their progress in the program.
- At the end of each rotation, all supervisors are also asked to complete a written evaluation of their intern’s performance and to discuss this evaluation with the intern. Concurrently, each intern is asked to evaluate each supervisor.
- At the conclusion of each rotation, the Psychology Internship Director summarizes the supervisory evaluations of each intern and forwards these to the Director of Training of each intern’s respective graduate program.

## THE NAPA COMMUNITY

NSH is located in Napa (pop. 74,000), the largest community in the renowned viticulture center. The schools in the area are good, and there are a number of after-school and day-care centers for children of working parents.

The climate is often described as Mediterranean. Fall and spring days are pleasant and summer days are warm, with three or four brief heat waves during the summer. The temperatures during summer nights range between 50 and 55 degrees. The rainy season begins in November, with little or no rain after April. Winter day temperatures fluctuate between 50 and 65 degrees, with evening temperatures rarely dropping below 32 degrees between mid-December and March. Apartments, duplexes, and houses are readily available in Napa. Most rentals are unfurnished, but come with a refrigerator and stove. A modern, one bedroom, unfurnished apartment is typically available at \$1000+ per month; a one-bedroom, furnished is available for \$1200+ per month. Three-bedroom, 2-bath homes average \$1500 - \$1700 per month. Despite the fact that housing is available within walking distance of the hospital, a car is considered essential in this community. Hospital staff does commute varying distances, with the majority carpooling from adjacent municipalities. *Dormitory-style housing on hospital grounds is available to interns at no cost.*

### ACTIVITIES IN THE SURROUNDING AREA OF NAPA

Some of the many leisure and recreational activities in the immediate and not-too-distant areas are:

#### A. NAPA VALLEY:

- Many award-winning restaurants;
- Over 200 famous Napa Valley Wineries and tasting rooms, which may include a relaxing picnic lunch;
- Hot-air balloon rides over the valley, providing a unique vantagepoint for surveying the wine country;
- Bicycle riding along valley backroads;
- Nearby Calistoga, home of mineral water and hot springs, offering natural spas, mineral baths, mudbaths, shops and restaurants;

- Several public golf courses, swimming pools, tennis courts, horseback riding stables, fishing and hiking areas, softball leagues, and campgrounds provide outdoor recreational activities;
- The local symphony, Pretenders Playhouse, and several choral and theater groups invite attendance, and participation in productions;
- Napa Valley College, a community college, offers a variety of cultural, recreational and social activities;
- Napa Valley College and Napa Parks and Recreation Department offer courses in arts and crafts, foreign languages, wine appreciation, computer programming, and physical activities (e.g., swimming, racquetball, aerobics, Tai Chi, yoga and meditation);
- There are several art shows held annually in local galleries and parks;
- Several wineries host annual summertime festivities, including jazz, pop, and classical concerts featuring top-name entertainers;
- There are many active charitable, social, recreational and/or professional organizations and clubs.

## **B. AN HOUR OR LESS BY CAR FROM NAPA:**

- Nearby San Francisco (52 miles) offers a wealth of cultural, educational, and recreational activities.
- Berkeley (40 miles).
- Lake Berryessa (20 miles).
- Mt. Tamalpais (45 miles).
- Muir Woods (40 miles).
- Sausalito (40 miles).
- Sacramento (60 miles).

- The Sonoma Coast (50 miles).

### **C. OTHER AREAS OF INTEREST:**

- The Santa Cruz Beach and Boardwalk area is 120 miles southwest.
- Monterey and Carmel, gateway to Big Sur, are about 30 miles further down Highway 1.
- Picturesque Mendocino on the Northern California coast is approximately 180 miles away.
- Many ski resorts are within three to five hours drive from Napa.
- Lake Tahoe is roughly 175 miles east.
- Yosemite National Park is 180 miles southwest.

### **DIRECTIONS TO NAPA STATE HOSPITAL'S PSYCHOLOGY BUILDING**

#### **From San Francisco:**

Travel east on I-80  
Exit on Highway 37 (marked with "Napa" sign)  
Drive 2 1/2 miles  
Turn right on Highway 12/29 (also called Sonoma Boulevard)  
Drive 6 1/2 miles until the "Y" split in the road  
Follow the directions below\*\*

#### **From Sacramento:**

Travel west on I-80 Exit Highway 12 West (marked with "Napa" sign)  
Drive 6 miles until the road reaches a "T"  
Turn right on Highway 12/29  
Drive 1 1/2 miles north to the "Y" split in the road  
Follow the directions below\*\*

#### **From the East Bay:**

Travel north on I-680  
Exit on I-80 West  
Exit Highway 12 West (marked with "Napa" sign)  
Drive 6 miles until the road reaches a "T"  
Turn right on Highway 12/29  
Drive 1 1/2 miles north to the "Y" split in the road  
Follow the directions below\*\*

**\*\*\*After the "Y" Split:\*\*\***

Take the right-hand fork, which directs you toward Napa

Drive 2 1/2 miles north to Napa State Hospital

Turn right at the main entrance

The Psychology Building is the last building on the left of Magnolia Blvd.

Park in any convenient location and enter the Psychology building at the door marked **Psychology Offices**.

## **APPLICATION INFORMATION**

### **NATURE OF THE POSITION**

A. The CPIP is fully accredited by the American Psychological Association (APA). The address and telephone number of APA is as follows: American Psychological Association, 750 First Street, NE, Washington, DC 20002; (202) 336-5979.

Four fully funded positions are available starting September 1, 2007 and continuing for a full year.

The stipend is \$28,548 (USD) per year.

Medical insurance for the intern and his or her immediate family is provided at no charge or minimal charge, depending upon the program selected. Dental insurance is also provided.

Thirteen sick days and ten and one-half vacation days are available. The State of California also observes thirteen holidays. Five days of paid educational leave are available.

### **ADMISSION CRITERIA**

Applicants must be doctoral candidates in clinical psychology. Applications from counseling psychology programs are acceptable if coursework covers major content areas found in clinical psychology programs. Applicants from APA-approved programs are preferred.

- All requirements for the degree, with the exception of the dissertation, must be completed by the start of internship.
- Applicants need not be U.S. Citizens.

- **STUDENT DISCLOSURE OF PERSONAL INFORMATION.** The CPIP adheres to APA's Ethical Principles of Psychologists and Code of Conduct, December, 2002. Regarding Principle 7.04, interns are not required to disclose personal information. However, in supervising an intern's clinical work, an intern may be asked, for example, to describe how it feels to work with a particular patient, as part of clinical inference-making or part of an exploration of countertransference reactions. Occasionally, an intern may be *invited* to talk about some aspect of their personal history or about psychological conflicts, which directly bear upon their work with a particular patient.
- **IMPORTANT NOTICE.** Applicants may not be eligible for a Clinical Psychology Intern position if they have ever been convicted of a felony. Interested applicants, who have been convicted of a felony, should contact the Psychology Internship Director well ahead of the application deadline, to determine eligibility.

Napa State Hospital is an Equal Opportunity Employer

## **APPLICATION PROCEDURE**

- A. Complete the AAPI application form. AAPI applications are available at graduate schools or can be downloaded from the APPIC Web site. The APPIC web address is: [www.appic.org](http://www.appic.org). Click on the "Forms and Document Downloads" from the APPIC home page. Our match # is 1421
- B. Please submit copies of all graduate transcripts. Sealed copies of transcripts may be included with your AAPI application.
- C. Three letters of recommendation. Sealed and initialed copies may be submitted with your application
- D. Curriculum Vitae
- E. Complete the State of California Examination and/or Employment Application Form. To obtain this form, return to the Home Page of the DMH Website ([www.dmh.cahwnet.gov](http://www.dmh.cahwnet.gov)), and click Job Openings. Then scroll down to State Applications Form (letter F). Please complete this form completely, even though much of this information is probably already included in your vita.
- F. Address application materials to:

Richard Lesch, Ph.D.  
Psychology Internship Director  
Department of Psychology  
Napa State Hospital  
2100 Napa Vallejo Highway  
Napa, CA 94558-6293

Materials may also be faxed to the Psychology Department, Napa State Hospital at (707) 253-5341.

**The completed AAPI application and all supporting materials must be received by Wednesday, November 15, 2006.**

If you include a self-addressed stamped postcard, we will notify you that we have received your application materials. We adhere to the APPIC and APA policies and procedures regarding offers and acceptances. All application materials will be reviewed and rated by the Psychology Internship Advisory Committee. Applicants who receive the highest rankings will be invited for an in-person interview. Applicants who prefer to interview by telephone may do so. Interviews will be conducted in January 2007, and will include an orientation to our training program, meeting with our current interns, and hospital tour.
